

Control Room Software - Bug #3480

Update window manager software to move from KDE to GNOME

02/15/2013 11:23 AM - Andrew Norman

| | | | |
|--|---------------|------------------------|------------|
| Status: | Resolved | Start date: | 02/15/2013 |
| Priority: | Normal | Due date: | |
| Assignee: | Andrew Norman | % Done: | 100% |
| Category: | | Estimated time: | 0.00 hour |
| Target version: | | Spent time: | 0.00 hour |
| Description | | | |
| We want to not use the SLF6 version of KDE. | | | |
| Instead we want t move to gnome which will be supported till 2018 and can still use most of the KDE tools (kdialog etc...) | | | |

History

#1 - 02/15/2013 11:32 AM - Andrew Norman

Used the yum groupinstall command to update parts of the window system.

To do this I did a:

```
yum grouplist
```

to get a list of the available groups. Then I did a:

```
yum groupinstall "Desktop Platform Development"
```

To install the headers and development libs.

The other groups that were needed were:

Desktop
Desktop Platform
General Purpose Desktop
KDE Desktop
Desktop Debugging and Performance Tools

I also installed the "TeX Support" group to get the right fonts to match LaTeX documents

#2 - 02/15/2013 11:33 AM - Andrew Norman

- % Done changed from 0 to 30

Packages installed

Gnome related packages are installed.

#3 - 03/21/2013 02:04 PM - Andrew Norman

- Status changed from New to Resolved

- % Done changed from 30 to 100

Gnome window manager is in production
