<b>Description</b>			
<p>After the previous issue I posted this morning about a broken display I am now seeing other problems. Attempting to edit another display I cannot even open the display. This is the display I am trying to open: /Work_in_progress/Karns/RFQ_VAC.xml The message I get is: "Cannot Open Display, Premature end of file." I was working on this file 2 days prior to this problem when the Builder program crashed due to excessive heap space (the javaw application was using 320MB+ of memory). Yesterday I was able to open the display in the Builder because I verified that I lost the work I had done prior to the Builder crashing.</p>
