Description			
Hi, Is it possible to allow users to clone a git repository without giving them an account, i.e. I would like anyone who wants clone the repository to be able to do so. I tried the command: <pre>git clone ssh://cdcvs.fnal.gov/cvs/projects/booster_loco</pre> but that obviously doesn't work. Thanks!

- Estimated time set to 0.10 h

If it is a public project (as that one is) then there is an http read-only url for the repository, in this case:

http://cdcvs.fnal.gov/projects/booster_loco

so they can

```
git clone http://cdcvs.fnal.gov/projects/booster\_loco
```

(once you put something in it...)
