Description			
The Frontend in master is not forking when querying the factories for the global attributes. The net effect is that those operations happen in sync instead of async mode, potentially significantly delaying the frontend loop times.

I think I have implemented the fix.
It is in branch_v3plus_3904.

However, I don't have the time to properly test it. I just verified it passes the pylint test.
Parag: Can you please test it out?
