Target version:		Spent time:	0.00 hour
Description			
Allow ASCII characters to be entered. If nothing else I think Greek characters would be a good place to start.

This is a bug associated with the JSoup library I am using for html sanitizing. Somewhere the character encoding is being lost. UTF-8 is compatible with JSoup but JSoup is not seeing the unicode and ASCII characters as UTF-8. From submission does encode to UTF-8 and all inputstreams are in UTF-8 so I'm unsure where the disconnect is.

Fixed and released. The problem was that the Jsoup library was not properly escaping ASCII characters.
