Description			
Hi, I just created a subproject but unfortunately, I gave it the wrong identifier. Is it possible to change it to something that I want. Thanks!

You cannot change the identifier through the web interface. We **could** change it in the database, but this will not change:

- cross-project wiki references
- * repository names, if you had repositories created against the project
- * possibly other things I'm not thinking of

But if you do not have much put in the project yet, it is easiest to just delete it and re-add it...
