Target version:		Spent time:	0.00 hour
Description			
<p>I would like to address the following issue regarding the G4NUMI production. By looking at the G4NUMI files (both 2013 and 2014 productions), I learned that the following objects are not filled: tpx, tpy, tpz. Is it possible to fill these objects with the next production ? It would be useful to have them also for some new analysis that we have ongoing. Just informative: Flugg files contain this information.</p>
