| Description | | | |
| <p>I'm trying to run the fcl file /lariat/app/users/acciarri/Electron_Reco/fuzzy_reco.fcl to reconstruct simulated electrons. The lar job crashes pretty soon as CalWireT1034 does not find ResponseFile1.5.root. This happen running the .fcl file in the GIT repository. I was running the same fcl file in the SVN repository last month and it worked fine.</p> | | | |

This is a LArIAT ticket in the wrong tracker. Likely irrelevant now.
