Description

around 6:10pm 2/15/2014...
Clicking "Register / Update / Unregister a Personally Owned Device" in the service catalog takes 25 seconds to pull ip the form... I have 7 existing devices if that matters. (2/15/2014 6:12pm)
I edited an existing personal device and it took 39 seconds after I hit submit before I got the order status page.

Suddenly at 6:15pm everything is fast again...
