Description

Steve Magill:

```
I have looked at the new changes you made to the shift calculations in the ECL.  I was able to put
 in our carryovers from last time and to save the quota for this period.  A couple minor things :
1) can you include a (xx%) column after the carryover has been added?  This is the number we use t
o compare to the quota.
2) I think the number of shifters (160 in our case) is in the wrong place.  It should be under the
 column that has the current shifts and shifters in it.  The sum of the next to last column (curre
nt + carryover) should be the points signed up (395.1) and should have the percentage of the quota
 as mentioned in 1) (395.1/410.0 = 0.964).
3) Under "Assigned Points", the percentage is not necessary and actually is incorrect considering
the carryover, so for NOvA, we don't need the percentage reported in this place.

The carryover is just what we wanted and with the few minor changes here, we can use this without
other changes when reporting shift quota to our collaborators.
```
