

JobSub - Bug #6364

Milestone # 6691 (Closed): Improve error reporting in client

client should generate more helpful error messages

05/28/2014 04:43 PM - Dennis Box

Status: Closed	Start date: 05/28/2014

Target version: v0.4	Spent time: 1.50 hour
First Occurred:	Stakeholders:
Occurs In:	
Description Some examples of unhelpful error messages: If you use the client to submit <code>file://my_job.sh</code> and <code>my_job.sh</code> doesn't exist you get this error: PyCurl Error 26: failed creating formpost data JobSub remote submission failed. If you forget the port number on the <code>--jobsub-server</code> option for any of the commands you get this error: 'Peer certificate cannot be authenticated with known CA certificates' If you misspell the accounting group e.g. <code>micorboone</code> you get this error from the clients: Server response code: 200 Response ERROR: User authorization has failed Consider this an umbrella/parent ticket for the above 3 unhelpful error messages. The integration test suite should iterate through as many options as possible to find more unhelpful errors.	
Subtasks:	
Bug # 6365: unhelpful error message when submitting a nonexistent file	Closed
Bug # 6373: unhelpful error message from <code>jobsub_fetchlog.py</code>	Closed
