#### Description

So it turns out Redmine makes a dynamically generated robots.txt (see <https://cdcvs.fnal.gov/redmine/robots.txt>) to prevent bots from scanning parts of Redmine that would bog things down, etc. but this doesn't work in our current configuration, because we map it to a subtree (/redmine) and

1. robots.txt is only looked for at the top level
2. it doesn't have the /redmine in the paths

So we need to put in a script to convert the Redmine one to a correct one and put it at `http{s,}://cdcvs.fnal.gov/robots.txt` so it will take effect.

#### History

##### #1 - 07/01/2014 11:56 AM - Marc Mengel

- File `make_robots_txt` added
- Description updated

Put a draft together of a script to do this, need to put it in crontab and give it teeth (it has to rename `robots.txt.new` to `robots.txt` at the end).

We'll need to do a change request for this.
