Description			
<p>Greetings, based on the discussions at the Duluth meeting I'd like to invite you to help us make a newer faster better cleaner Minerva job submission scripts suite.</p> <p>https://cdcvs.fnal.gov/redmine/projects/mnvproso/wiki/List_of_modules_used_in_job_submission_scripts</p> <p>has a list of specific general modules that we need to make a cleaner job submission script.</p> <p>Some of these already exist in ProductionTools but need a cleaner interface to samweb and need to be made more generic.</p> <p>At the infrastructure meeting on Tuesday, I'd like to discuss each module and can then work with individuals on design and adaption of our existing implementations. In most case, most of the implementation is done and it's really a matter of pulling it out of the big long scripts and making it into a module.</p> <p>please look at the list at the link above and reply if you see a module you would like to work on. The plan is to spend some time thinking and then a reasonably short time coding and testing.</p> <p>TThanks, Heidi</p>
