

Fermi Redmine - Bug #680

configure auto generated links to point to external webserver

10/06/2010 12:15 PM - Alex Kulyavtsev

Status:	New	Start date:	10/06/2010
Priority:	Normal	Due date:	
Assignee:	Marc Mengel	% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:		Spent time:	0.00 hour
Description			
<p>Git or cvs browser automatically generates link to the bugzilla issue or review board bug assuming bugzilla and review board are on the same site, cdcvs. It points to the not related issue if the project uses external bugzilla and review servers.</p> <p>Is will be desirable to have configurable external bugzilla and review board servers for the project, or have automatic linking turned off.</p> <p>Example: https://cdcvs.fnal.gov/redmine/projects/enstore/repository/changes/src/encp.py</p> <p>(bugzilla #649) refers to https://cdcvs.fnal.gov/redmine/issues/649 it shall point to http://www-enstore.fnal.gov/Bugzilla/show_bug.cgi?id=649</p> <p>(Bugzilla #839, review board #196) points to https://cdcvs.fnal.gov/redmine/issues/196 instead of http://uqbar.fnal.gov/reviews/r/196/</p>

If you are not using the bug tracker in Redmine, we could put in a redirect that sends folks to your bugzilla if they try to go to the Redmine issue tracker...
The text of the url would be the same, but you would end up in the right place...
