Image Tool - Bug #7023

Remember fit selection between acquisition types

Description

For a One-shot acquisition, it looks like you switch to looking at the image-tool fitting regardless of what's selected, which makes sense, but once we go back to Live Acquisition, it looks like the Image Tool fitting is still selected. I can get back to the front end fitting if I toggle the analysis radio buttons off front-end fitting and back again, but I was wondering if you could just detect which one is selected on live acquisition start.
