

NOvA Database - Bug #7873

Recent changes to Table.h/cpp seem to have broken access to database in the online

02/16/2015 12:51 PM - Kurt Biery

Description			
Late last week, Martin reported that he could not run the following from the novadaq account on novatest01:			
<ul style="list-style-type: none">• 'setup_online -z 2'• 'source `which setupNovaDBEnvVars.sh`'• 'DAQConfigEditor'			
The problem seemed to be that the DAQConfigEditor code was trying to contact the novadbdev database server even though he had explicitly requested the FCCDAQ environment when setting up the DB.			
I confirmed this behavior and found that rolling back to earlier versions of NovaDatabase/Table.h/cpp fixed the problem. Given that, I believe that the changes to Table.h and Table.cpp on 09-Feb-2015 broke the use of the NOVADB env vars that we use in the online.
