<b>Description</b>			
<p>/opt/vulcan/v1.5/scripts/doacct-vulcan.py is broken. In TASK0059133, the user creation actually failed. Initial investigation showed it was stuck on cmsrocks54, which was long gone. In the past, when it timed out, it continued to execute the rest. Now it seems it simply quits after timeout. In TASK0059133, it also show the failure in connection to cmsstor24, which is in service. Not sure if it is related to network issues. More investigation and fix are needed.</p>			

### History

#### #1 - 06/27/2015 05:03 PM - Chih-Hao Huang

- % Done changed from 0 to 10

After carefully removing all cmsrocks54 related entries, doacct-vulcan.py seems to behave much better. It reached the end and copy passwd and group files correctly to all LPC-SL5.

#### #2 - 10/15/2015 11:57 AM - Chih-Hao Huang

- Status changed from Assigned to Resolved

- % Done changed from 10 to 100

This has been fixed long time ago.
