

artdaq-mfextensions - Feature #9862

It would be nice to be able to specify hostnames as well as IP addresses

| Description | | | |
| It would be nice to be able to use hostnames in the client (UDP destination) FHiCL in addition to the currently supported IP addresses. | | | |
| I did a quick test of using udp::resolver, but that complained about the resolver service not being found. | | | |
| This is a low priority issue. | | | |

History

- Status changed from New to Resolved

- % Done changed from 0 to 90

I did (I imagine) about the same thing you did, but it worked in my tests. Let me know if it doesn't work for you now.
